MEMORANDUM FOR: Director, NPIC

FROM: Chief, CIA/PID(NPIC)

SUBJECT: Information Concerning the PI effort on the
Chinese Atomic Energy Program

1. The following information has been compiled, at your request, reflecting the currently available photographic coverage of China, reports completed, and work currently in progress.

a. Large Scale Aerial Photography - In 1962 and to the present time in 1963 approximately 35% of China (including Tibet and Hainan) has been covered by large-scale aerial photography. Twenty-six missions have been accomplished since January 1962. (Attachment A). Immediate readouts (IPIR or SITSUM) have been performed on all missions. Detailed scans (MCI's) have been accomplished on 20 of the missions, representing approximately 35% of the Chinese land area. An MCI was not performed in several instances because of a short time interval between dates of comparative photo coverage or because of camera malfunction.

b. KEYHOLE Photography - KH photography since August 1960 covers 85 to 90% of Communist China. Approximately 40% of this coverage is obscured by scattered to heavy clouds. Twenty-three KH missions have been accomplished during the period from August 1960 to December 1962 (Attachment B). Mission Coverage Indexes have been accomplished on 16 (70%) of these missions. It is estimated that approximately 75% of China has been scanned in some detail through accomplishment of MCI's in these 16 missions.

c. Reports Completed - The following number of detailed reports, arranged by category, have been produced since 1 January 1960 (not including IPIRs, MCIs or MCPs):

<u>NPIC</u>	
Guided Missiles	10
Nuclear Energy	10
Other	5
Total	25

<u>CIA/PID</u>	
Guided Missiles	16
Nuclear Energy	17
Operational	33
Other	19
Total	85

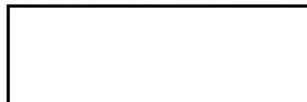

d. The following number of projects on China are presently in work:

SC 02398-63/KH
Page Two

<u>NPIC</u>	
Guided Missiles	4
Nuclear Energy	4
Total	8

<u>CIA/PID</u>	
Guided Missiles	3
Nuclear Energy	5
Operational	15
Trans. & Ind.	38
Total	61

2. Presently the detailed scanning phase embodied in the MCI is being improved and it is hoped the backlog of missions waiting for this process will be cut to current inputs. In addition selected scans for specific categories of installations will be undertaken on a routine basis as additional manpower becomes available. This should completely minimize any failure to identify and analyze significant installations as they appear.
